

Sfax connects workflow gaps.

Sfax is the best alternative to traditional faxing. You can send, receive, annotate, digitally sign, and manage faxes without printing a single physical document. All your documents are stored on encrypted cloud-based servers. Nothing is ever stored on a local hard drive or server, where you run the risk of compromising data security.

Sfaxes provides you with a host of tools to help limit tedious and time-consuming manual processes and paper, to improve your document workflow. You can control access, track usage, and protect documents and data.

Benefits at a glance

- /// HIPAA-secure
- /// Transparent pricing
- /// US-based, human support
- /// Industry-leading outbound delivery rates
- /// Easily supports enterprise faxing volumes
- /// Easy API integration with EHRs and other 3rd party applications
- /// Speed up workflows with mobile faxing

Sfax is built for healthcare

Features

Unlimited ports for sending & receiving faxes

Send and receive as many faxes at a time without restriction – no busy signals. Never miss a referral.

Powerful admin controls

Administrators have full control to manage users, set access, permissions, security settings and generate reports.

Print to fax

Sending your fax is as easy as printing a document. Using Windows, simply select 'print' to open Sfax to annotate, sign, and send your PHI. Saves steps and saves time.

Audit trails & activity tracking

A complete audit trail is generated for all the activity that occurs on each document for full HIPAA compliance.

Annotations & digital signature

Make notes, redact information and sign documents; add marks and checks to quickly and easily review, annotate and fax PHI.

Contact management & folders

Create private contacts or share them across your organization, and organize into groups for easy access. Contact lists prevent users from dialing wrong numbers which could result in PHI ending up in the wrong hands.

Mobility

Run Sfax from any web browser on any device so you can send and receive faxes in the field. Receive and compose faxes using Sfax for iOS.

Download service

All of your faxes will download securely to your Windows desktop or server so that you don't have to log into the web portal to view/download your faxes.

API

Get secure, compliant, cloud-based faxing using our RESTful API within your software application.

Human support

Our US-based support team strives every day to exceed industry response times.

Sfax and HIPAA

No emailed PHI

Sfax delivers faxes to a secure portal where they can be accessed (email is not secure).

We sign BAAs

If your fax provider won't sign a BAA then you are not HIPAA compliant, and therefore subject to audits and fines.

Sfax creates full audit trails

HIPAA requires an audit trail for every version of a faxed document.

HIPAA trained staff

Employees undergo a criminal background check, HIPAA training and assessment as part of their employment contract.

We are Sfax.
