

# Stak and Behavioral Health

HIPAA  
Secure

Unlimited  
Storage

Care Team  
Collaboration

Easy  
Implementation

**If you're in behavioral health, odds are you work in a wide range of clinical settings. Make sure your productivity tools are as dynamic as your day.**

The Stak document platform can be universally adopted by a single practitioner to enterprise-level hospital groups. Users can access Stak from anywhere via computers, smartphones and tablets. HIPAA calls for covered entities to have storage contingencies in place for natural or man-made disasters. Stak provides secure cloud storage to make sure you are compliant. Accessible from any web browser, or from desktop versions for both Mac and PC. No matter the device, your patient's information remains confidential and HIPAA secure.

Behavioral health practitioners manage patient information in very specific ways. It's important to have a document management solution that securely captures and stores patient notes and medical information according to the practitioner's needs, while also meeting HIPAA requirements.

Since 1998, Scrypt, Inc., has been solving the mental health practitioner's document storage, collaboration and exchange challenges. We understand that there's a unique need for a separate and secure way to store psychotherapy notes. Stak conforms with the most stringent HIPAA privacy and security requirements while also helping practitioners of behavioral health maintain their patient's confidentiality.

### »» Private Practice

Time is money. Being in private practice means you are responsible for all of your operational needs such as managing patient information and filing insurance claims. The less time you spend managing documents, the more time you have for patients. Stak will streamline your day with these features:

- **Batch upload multiple scanned documents**
- **Workspaces easily scale to the clinic's needs**
- **Unlimited storage**
- **Built-in faxing**

### »» Small Clinic or Group

Small teams need easy collaboration. Small clinics need to communicate clearly with other members of the care team. With several members, clinics must be able to collaborate on multiple patient files securely and according to your clinic's work flow.

- **Batch upload multiple scanned documents**
- **Workspaces easily scale to the clinic's needs**
- **Unlimited storage**
- **Built-in faxing**

### »» Institutional

Large institutions can be rife with miscommunication and antiquated systems. More employees in a system means a greater chance of mistakes along the patient care path. According to the Office of Civil Rights (OCR), there were 253 healthcare breaches that affected 500 individuals or more with a combined loss of over 112 million records in 2015.

- **Workspaces scale to your needs**
- **Unlimited storage**
- **Built-in faxing**
- **Signed BAA**
- **HIPAA secure**
- **Full audit trail**
- **Secure portal no emailed PHI**

## We are Scrypt. Work confident.

Scrypt, Inc. has been highly successful in helping our healthcare customers improve collaboration and workflow while protecting sensitive and business-critical information. Scrypt delivers value to the healthcare industry by applying the power and security of the cloud with three distinct productivity tools: Sfax, Stak, and DocbookMD. All three enable HIPAA-secure approaches to healthcare collaboration. Sfax is a pure play cloud faxing tool, Stak is a document and workflow management and collaboration application, and DocbookMD is a messaging and care collaboration platform for the entire care team. We remain dedicated to improving productivity through collaboration so that our customers can work better, with confidence.
